

## CMS Tecnocut Jetpower EVO 30HP Pressure Intensifier Waterjet Pump

The Jetpower EVO Waterjet Pump designed and built by CMS Tecnocut in Italy is a high performance high pressure intensifier suitable for a wide range of waterjet cutting.

Available in three power ratings of 30HP, 60HP and 120HP the Jetpower EVO utilises two, three or six electronically synchronised and parallel independent cylinders that provide a constant pressure. This design avoids the typical reductions in pressure of traditional intensifiers with single opposite cylinder and pressure attenuators.

All the models provide a maximum pressure of 4150 Bar or 60,000 PSI which caters for the vast majority of waterjet cutting requirements.

Key features of the Jetpower EVO are;

- Longer life between services compared to traditional intensifiers due to no pressure attenuator being required and lower cycle times
- Ability to carry out maintenance on one cylinder while pump is still operating - reducing downtime
- Easy access to cylinders due to design and construction
- Electronic pressure control built into waterjet machine control

allowing monitoring and feedback of pressures, temperatures and filter status

As with all CMS Tecnocut products, the Jetpower EVO is totally designed and built in Italy to stringent quality standards

Features

- Electronically synchronised and parrallel independant cylinder design
- Low maintenance costs due to reduced wearing parts & lower cycle times
- Sound proof protection providing low noise rating
- Constant Pressure, temperature & filter status control monitoring from machine console

Technical Specification

MODEL	Jetpower EVO 30HP
Power kW/HP	22.5/30
Cylinders No	2
Max Water Pressure bar/psi	4150/60,000
Max Flow Rate lpm	2.5
Max Dia of Orifice mm	0.28
Voltage V	400
