

Euroboor TUBE.55/AIR

The portable Euroboor TUBE.55/AIR pneumatic drilling machine is equipped with an air-powered, spark-free motor and a non-electric, permanent dual magnet base. Connected to a compressor, it can be used for drilling on round as well as flat workpieces where electrical machines are less convenient or not allowed, especially in areas and spaces with potentially explosive atmospheres, such as offshore and petrochemical industries, as well as opencast mining.
